## Press Release

### **LOYTEC wins “Austrian’s Leading Company” award**

During Austria’s “Fest der Wirtschaft”, the building automation company LOYTEC won the first prize as “Austrian’s Leading Company” in the small company group. Assessment criteria were economic sustainability for financial ratios, rating and growth.

The laureates as best companies were honored by the President of Austrian Federal Economic Chamber, Dr. Christoph Leitl, in Vienna. He emphasized the optimism within the current crisis. Leitl symbolized Crisis, i.e., in German Krise, Creativity, Risk, Innovation, Strength without short-term Stock Option mentality, and Success, i.e., in German Erfolg.

LOYTEC, an expert in building automation, provides integration of heating, ventilation, air-conditioning, lightning, blind-control and other building functions, which ensures energy-saving at minimum operation cost.

CEO Hans-Jörg Schweinzer describes a typical cost saving scenario of LOYTEC’s Technology as follows:

Office rooms are shaded during summer, therefore extra cooling is not necessary. Sunlight will be redirected into the room to reduce artificial light. Based on occupancy and other criteria, individual areas control their space temperature.

Information gathered is globally collected is analyzed and optimized for energy consumption reductions. With these methods, a 30 % energy saving can be reached in a typical building.

Loytec’s recently released L-Web web server can control lighting, heating, air-conditioning, and other building functions from the PC. L-Web can be configured to get access from any location to get actual status of the building. A hub organization is able to monitor a building, e.g., all windows are closed, doors are locked, lighting and heating are switched off, etc. “It’s also possible to get an e-mail or an SMS if a door or window is open, or the power consumption is too high – even if the user’s office is 50 km away,” said Technical Director Dr. Dietmar Loy.

LOYTEC delivers into 70 countries of the world. It has an export quote of 98 %.

Showcases and references are the “Berliner Hauptbahnhof”, the “Landesbank Baden-Württemberg”, the LTU Arena Düsseldorf, the German Parliament, the world’s largest cruise liner “Genesis”, the Stanglwirt, international hotel chains, the Embassy of Netherland , the “Landeskrankenhaus Rohrbach”, and the “Bundesschulzentrum Wörgl”.

About LOYTEC:

LOYTEC provides highly functional, cost-effective and user-friendly products for control networks to customers around the world. Our solutions are designed to serve today's toughest networking needs.

Founded in 1997, LOYTEC today is a leading European provider of network analysis tools, network infrastructure products, gateways, and management solutions for the building

automation market including a system independent solution for distributed alarming, scheduling and trending (ASTTM concept) based on communication standards. With its core technologies LC3020, ORION protocol stack (CEA-709.1), L-CNIP (CEA-852), and BACstack (ISO 16484-5), LOYTEC offers an open platform for flexible, robust, high performance networking. In addition to the CEA-709 and BACnet protocols, LOYTEC offers solutions based on communication standards such as OPC, DALI, KNX (EIB), Modbus, and M-BUS.

From headquarters in Vienna, Austria, LOYTEC offers products and design services to customers around the world. Strong partnerships with leading companies in the IT and automation market together with intensive research work with universities shape the portfolio to meet the requirements of a worldwide market.
